Worlds of Work

Last month we participated in Worlds of Work (W.O.W.), one of our community outreach events. Worlds of Work gave middle and high school students a hands-on look at career opportunities available in Alabama. Team members told students about the different positions within Crimson Racing and how they could get involved in the future!

New Shop!

We are so excited to announce that after 5 months of renovating, we have moved into the new shop! This upgrade gives us more workspace and an area completely dedicated to composites. There is also a general fabrication area that we share with other organizations.

Drive Days

This past month, we had two drive days on the 5th and the 13th. On the 5th, new members took the kart out to gain driving experience and understand how it works. On the 13th, we collected data and tested the cooling system of the CR 19. There will be a couple drive days in November where we hope to refine changes and further develop our drivers!

Kart Project

The Kart Project introduces new members to the process of designing and building a motorized vehicle. They have completed the initial design review and the design will be finalized by the end of the semester. They are excited to start building their design in the spring!

What’s Next: Crowdfunding!

Want to support Crimson Racing? We will be having a crowdfunding campaign for the next month! Make a donation at crowdfunding.ua.edu that will help us reach our finish line of $10,000!
