Drive Days
We had our first drive days of the school year this past month! New members had their first opportunity to attend a drive day where they assisted in collecting data for the Kart. By attending, it helped them get acquainted with driving and the operations involved in drive days. They gained experience in accessing a situation and fixing problems on the fly.

E-Day
This past month, the University of Alabama hosted Engineering Day (E-day) for thousands of middle and high school students. This event enables prospective students to learn about the different departments within the College of Engineering. Members of the team volunteered to present to visiting students along with student engineering design teams from other departments.

Road America with John Allen
John Allen, an alumnus of the University of Alabama, flew Noah, Max, and Oakley to Elkhart Lake, Wisconsin to participate in a race on Road America. They worked alongside Allen and his team, AutoTechnic racing. The team won a pole position in the first qualifying round and had two podium finishes.

Hendrick Motorsports Sponsorship
We are one of five teams that received the Hendrick Motorsports Sponsorship. This sponsorship gave us access to Dymola. Dymola is a multi-body vehicle dynamics simulation software. This software will help us create better models and let us look at the full car assembly.

What’s Next?
Some events that are approaching are World of Work and Tech or Treat. We will also have our own tailgate at the Alabama vs. Tennessee game! Two of our members Colin and Max have been working with carbon fiber and started making the wing flaps for the aerodynamic package. We’re excited to see what next month brings!
